

# OpenWrap server-side error codes

ERROR CODE	ERROR MESSAGE	DESCRIPTION
1	Slot not mapped	This error is returned when a slot name (like adunit@size) is not mapped in the wrapper.
2	Missing Configuration Error	This error is returned when tagid/divid is missing in the request.
3	Timeout Error	This error is returned when prebid fails to respond in a given time. (No response from Prebid Server) This error also comes in cases where server-side times out.
4	No Bid from Prebid	When a partner returns no bid. This error is returned by prebid If there is no bid for a partner in the prebid's response we form a default bid with error this error.
5	Partner Timed out	This error comes when a particular partner does not respond in a given time. This error is returned by prebid library.
6	Invalid Configuration	This error comes in case of wrong publisher id/ profile id/ version id combination is being sent in the request.
8	Invalid Creative	This error indicates that the creative returned by a partner is not in the required format. For e.g. the creative returned for a video request is not a VAST.
9	Cache PUT Failed	This error is returned when the operation to push a creative to cache fails.
11	All partners throttled	This error comes when all the partners configured for a profile are throttled at runtime
12	Partner throttled	This error comes for a partner when it is throttled at runtime
13	Banner /Video disabled through config	This error occurs when Banner and/or Video bidding has been disabled for a slot via the Ad Unit configuration file which results in Banner and Video objects being removed from the request, thereby turning the impression invalid. An impression in the request should have at least one of the two objects, Banner and Video, present.
